SUBJECT INDEX

Aberrations, interferograms and spread functions of the sixth-order, 21
Activities in the national and international standardization of image quality, trends and, 166
Afocal visual instruments, criteria for testing of, 191
Applicability of the optical transfer function concept to thermal imaging systems, 256
Assessment of lens quality. digital instrument for, 90
Assessment, modern methods of image, 2
Assessment, systems engineering approach to imaging systems, 264
Assessment of visual instruments, contrast sensitivity in the, 202
Automatic measurement of cathode ray tube modulation transfer functions, 139

Calculation of modulation transfer function with desk-top computers, 14
Camera, image quality and modulation transfer function for a 48-inch, 219
Cathode ray tube displays, evaluation of modulation transfer function and veiling glare characteristics for, 130
Cathode ray tube modulation transfer functions, automatic measurement of, 139
China, optical transfer function measurement technique application in, 60
Components and imaging systems, theoretical prediction and experimental measurement of glare in infrared, 314
Computers, calculation of modulation transfer function with desk-top, 14
Contrast sensitivity in the assessment of visual instruments, 202
Criteria for testing of afocal visual instruments, 191

Density and signal-to-noise ratio, recognition of thermal images: effects of scan-line, 230
Desk-top computers, calculation of modulation transfer function with, 14

Device, performance calculation and optimization procedure for a fast electro-optic focusing, 37
Digital instrument for assessment of lens quality, 90
Displays, evaluation of modulation transfer function and veiling glare characteristics for cathode-ray-tube, 130

Effects of modulation transfer function and phase transfer function on visual performance, 211
Electro-optic focusing device, performance calculation and optimization procedure for a fast, 37
Engineering approach to imaging systems assessment, systems, 264
Evaluation of modulation transfer function and veiling glare characteristics for cathode-ray-tube displays, 130
Evolution of a procurement specification for optical germanium, 175
Experimental measurement of glare in infrared components and imaging systems, theoretical prediction and, 314
Eye modelling, 182

Facility for thermal imaging systems, test, 280
Factor of image transfer devices, an instrument for the measurement of the modulation transfer, 99
Fast electro-optic focusing device, performance calculation and optimization procedure for a, 37
Field performance using image intensified sights, modelling and validation of, 223
Focusing device, performance calculation and optimization procedure for a fast electro-optic, 37
48-inch camera, image quality and modulation transfer function for a, 219

Generation image intensifiers, measurement of veiling glare in 2nd, 315
Germanium, evolution of a procurement specification for optical, 175
Glare characteristics for cathode-ray-tube displays, evaluation of modulation transfer function and veiling, 130
Glare index, measurement of transmittance and veiling, 239
Glare in infrared components and imaging systems, theoretical prediction and experimental measurement of, 314
Glare measurements in optical instruments, survey of, 288
Glare in photographic systems, veiling, 309
Glare in 2nd generation image intensifiers, measurement of veiling, 315

High-speed production lens testing, 82

Image assessment, modern methods of, 2
Image intensified sights, modelling and validation of field performance using, 223
Image intensifier, signal-to-noise measurements on channel, 159
Image intensifier tubes, modulation transfer function of, 42
Image intensifier units, modulation transfer function system for, 148
Image intensifiers, measurement of veiling glare in 2nd generation, 315
Image quality and modulation transfer function for a 48-inch camera, 219
Image quality, trends and activities in the national and international standardization of, 166
Image transfer devices, an instrument for the measurement of the modulation transfer factor of, 99
Images: effects of scan-line density and signal-to-noise ratio, recognition of thermal, 230
Imaging lenses, optical evaluation of thermal, 123
Imaging systems, applicability of the optical transfer function concept to thermal, 256
Imaging systems assessment, systems engineering approach to, 264
Imaging systems, introduction to a NATO standard on the optical transfer function of, 171
Imaging systems, use of minimum resolvable temperature difference for the evaluation and specification of thermal, 268
Imaging systems, test facility for thermal, 280
Imaging systems, testing thermal, 273
Imaging systems, theoretical prediction and experimental measurement of glare in infrared components and, 314
Index, measurement of transmittance and veiling glare, 239
Infrared components and imaging systems, theoretical prediction and experimental measurement of glare in, 314
Infrared optics, instruments for testing precision, 111
Instrument for the measurement of the modulation transfer factor of image transfer devices, an, 99
Instruments for testing precision infrared optics, 111
Intercomparison of calculated and measured optical transfer function for a standard triplet lens, 52
Interferograms and spread functions of the sixth-order aberrations, 21
Intensified sights, modelling and validation of field performance using image, 223
Intensifier, signal-to-noise measurements on channel image, 159
Intensifier tubes, modulation transfer function of image, 42
Intensifier units, modulation transfer function system for image, 148
Intensifiers, measurement of veiling glare in 2nd generation image, 315
Introduction to a NATO standard on the optical transfer function of imaging systems, 171

Laser visual system, measurement of the optical transfer function of a scanned, 69
Lens, intercomparison of calculated and measured optical transfer function for a standard triplet, 52
Lens quality, digital instrument for assessment of, 90
Lens testing, high-speed production, 82
Lenses, optical evaluation of thermal imaging, 123

Measurement of the optical transfer function of a scanned laser visual system, 69
Measurement of transmittance and veiling glare index, 239
Measurement of veiling glare in 2nd generation image intensifiers, 315
Methods of image assessment, modern, 2
Minimum resolvable temperature difference for the evaluation and specification of thermal imaging systems, use of, 268
Modelling, eye, 182
Modelling and validation of field performance using image intensified sights, 223
Modern methods of image assessment, 2
Modulation transfer factor of image transfer devices, an instrument for the measurement of the, 99
Modulation transfer function with desk-top computers, calculation of, 14
Modulation transfer function of image intensifier tubes, 42
Modulation transfer function for a 48-inch camera, image quality and, 219
Modulation transfer function measurements on phosphor screens, 154
Modulation transfer function and phase transfer function on visual performance, effects of, 211
Modulation transfer function system for image intensifier units, 148
Modulation transfer function and veiling glare characteristics for cathode-ray-tube displays, evaluation of, 130
Modulation transfer functions automatic measurement of cathode ray tube, 139

National and international standardization of image quality, trends and activities in the, 166
NATO standard on the optical transfer function of imaging systems, introduction to a, 171
Night viewing system performance, practical guide to, 248

Optical evaluation of thermal imaging lenses, 123
Optical germanium, evolution of a procurement specification for, 175
Optical instruments, survey of glare measurements in, 288
Optical transfer function concept to thermal imaging systems, applicability of the, 256

Optical transfer function measurement technique application in China, 60
Optical transfer function of imaging systems, introduction to a NATO standard on the, 171
Optical transfer function of a scanned laser visual system, measurement of the, 69
Optical transfer function for a standard triplet lens, intercomparison of calculated and measured, 52
Optics, instruments for testing precision infrared, 111
Optimization procedure for a fast electro-optic focusing device, performance calculation and, 37

Performance calculation and optimization procedure for a fast electro-optic focusing device, 37
Performance, effects on modulation transfer function and phase transfer function on visual, 211
Performance using image intensified sights, modelling and validation of field, 223
Performance, practical guide to night viewing system, 248
Phase transfer function on visual performance, effects of modulation transfer function and, 211
Phosphor screens, modulation transfer function measurements on, 154
Photographic systems, veiling glare in, 309
Practical guide to night viewing system performance, 248
Precision infrared optics, instruments for testing, 111
Prediction and experimental measurement of glare in infrared components and imaging systems, theoretical, 314
Procurement specification for optical germanium, evolution of a, 175

Quality, digital instrument for assessment of lens, 90
Quality and modulation transfer function for a 48-inch camera, image, 219
Quality, trends and activities in the national and international standardization of image, 166

Recognition of thermal images: effects of scan-line density and signal-to-noise ratio, 230

Scan-line density and signal-to-noise ratio, recognition of thermal images: effects of, 230
Scanned laser visual system, measurement of the optical transfer function of a, 69
2nd generation image intensifiers, measurement of veiling glare in, 315
Sensitivity in the assessment of visual instruments, contrast, 202
Signal-to-noise measurements on channel image intensifier, 159
Signal-to-noise ratio, recognition of thermal images: effects of scan-line density and, 230
Sixth-order aberrations, interferograms and spread functions of the, 21
Specification for optical germanium, evolution of a procurement, 175
Specification of thermal imaging systems, use of minimum resolvable temperature difference for the evaluation and, 268
Speed production lens testing, high-, 82
Spread functions of the sixth-order aberrrations, interferograms and, 21
Standard on the optical transfer function of imaging systems, introduction to a NATO, 171
Standard triplet lens, intercomparison of calculated and measured optical transfer function for a, 52
Standardization of image quality, trends and activities in the national and international, 166
Survey of glare measurements in optical instruments, 288
Systems engineering approach to imaging systems assessment, 264

Temperature difference for the evaluation and specification of thermal imaging systems, use of minimum resolvable, 268
Test facility for thermal imaging systems, 280
Testing thermal imaging systems, 273
Theoretical prediction and experimental measurement of glare in infrared components and imaging systems, 314
Thermal images: effects of scan-line density and signal-to-noise ratio, recognition of, 230
Thermal imaging lenses, optical evaluation of, 123
Thermal imaging systems, applicability of the optical transfer function concept to, 256
Thermal imaging systems, use of minimum resolvable temperature difference for the evaluation and specification of, 268
Thermal imaging systems, test facility for, 280
Thermal imaging systems, testing, 273
Transfer factor of image transfer devices, an instrument for the measurement of the modulation, 99
Transfer function concept to thermal imaging systems, applicability of the optical, 256
Transfer function with desk-top computers, calculation of modulation, 14
Transfer function for a 48-inch camera, image quality and modulation, 219
Transfer function of image intensifier tubes, modulation, 42
Transfer function of imaging systems, introduction to a NATO standard on the optical, 171
Transfer function measurement technique application in China, optical, 60
Transfer function measurements on phosphor screens, modulation, 154
Transfer function and phase transfer function on visual performance, effects of modulation, 211
Transfer function of a scanned laser visual system, measurement of the optical, 69
Transfer function for a standard triplet lens, intercomparison of calculated and measured optical, 52
Transfer function and veiling glare characteristics for cathode-ray-tube displays, evaluation of modulation, 130
Transfer function on visual performance, effects of modulation transfer function and phase, 211
Transfer function automatic measurement of chathode ray tube modulation, 139
Transmittance and veiling glare index, measurement of, 239
Triplet lens, intercomparison of calculated and measured optical transfer function for a standard, 52
Trends and activities in the national and international standardization of image quality, 166

Use of minimum resolvable temperature difference for the evaluation and specification of thermal imaging systems, 268

Veiling glare characteristics for cathode-ray-tube displays, evaluation of modulation transfer function and, 130
Veiling glare index, measurement of transmittance and, 239
Veiling glare in photographic systems, 309
Veiling glare in 2nd generation image intensifiers, measurement of, 315
Viewing system performance, practical guide to night, 248
Visual instruments, contrast sensitivity in the assessment of, 202
Visual instruments, criteria for testing of afocal, 191
Visual performance, effects of modulation transfer function and phase transfer function on, 211
Visual system, measurement of the optical transfer function of a scanned laser, 69
